Who is SiSo ?

SiSo Inc. was founded in 1991. At the moment, the company has 25 permanent staff members in the Netherlands and 5 in the French office. SiSo mainly focuses on the purchase and sale of depreciated and surplus ICT equipment. This hardware is purchased from banks, industrial

companies, insurance companies, government institutions and System Integrators.

The majority of our sales occurs with end users, national as well as abroad. These activities are incorporated in the so-called service program ICT End of Life Services. We have a large international partner network, which is a component of our ICT remarketing activities. This enables SiSo to find market channels for purchased ICT hardware, as a result of which our clients receive a realistic residual value for their depreciated ICT equipment.

SiSo services

Thanks to our many years of experience with the international trade market, SiSo is able to achieve a high residual value for her relations on used ICT equipment. Besides achieving residual value (remarketing), we also provide the physical return, full inventory and registration of used client assets.

Computer systems with data carriers containing data and or software will be wiped by SiSo in a certified and guaranteed manner. This will be confirmed to our clients by a confidentiality and warranty clause. For this purpose we use the internationally recognized removal Blancco Datacleaner 3.7r1 software of Blancco Inc., Finland. This software has been approved by the Defense Infosec department of the British government. Blancco's software is used worldwide.

For example, by carefully applying these services SiSo has been a trusted partner for many years for large banks and insurance companies. They purchase SiSo's services because this guarantees them meticulous removal of confidential data on depreciated computer systems.

SiSo has a large list of references from top 100 companies in the Netherlands. Our "ICT End of Life Services" service program clients include governmental institutions, the banking sector, insurance companies, the industrial sector and system integrators.

International distribution network

Though the volume of used ICT hardware in Western Europe is very high, ICT End of Lifecycle Services can only be purchased if there is a realistic sales market for the used equipment in question. SiSo operates in the EMEA region through certified distribution partners, who are a component of our ICT remarketing activities. This enables us to find market channels for selling your ICT equipment, by which we establish the foundation for a realistic residual value. With this, we complete the circle of purchase and sale of used ICT hardware.

SiSo offers services that offer the best of both worlds, so that alluring business deals can be achieved for both markets.

SiSo Management team

SiSo's management team consists out of General Caroline Sontrop and Commercial Director Ed Alting Siberg.

Together with Ed Alting, Caroline Sontrop has founded SiSo in 1991. She has gained a lot of experience in purchasing and selling ICT equipment. Caroline Sontrop is responsible for SiSo's financial and organizational management.

As a commercial director, Ed Alting Siberg has also laid the foundation for SiSo's large distribution network in the EMEA region. He also is the initiator of many large charitable ICT projects in Third World countries, who, partly due to the SiSo Donation Fund, have become a big success.
