- ICT End of Life Cycle Services tuned to international environmental legislation

ICT End of Life Cycle Management

The computer world is dictated by the cutthroat pace of technological progress. Newcomers on the hardware market go out of date between a couple of months and a year. Depreciation in two to three years nowadays is common practice within a great deal of companies and organizations.

SiSo's extensive service portfolio under the name "ICT End of Lifecycle Management" guarantees smooth processing and removal or replacement of depreciated or surplus hardware. SiSo is able to allocate market channels for purchased ICT equipment, by which we achieve a realistic residual value for our clients. The majority of sales occurs with end users, national as well as abroad. These services have been incorporated in the so-called "ICT- End of Life Services" service program

Cost decreasing operation

Through our ICT End of Lifecycle Services we achieve a cost-effective operation for your ICT hardware that needs replacement. Based on an extensive inventory we are able to determine the correct residual value, in combination with services that round up replacement in a single process.

Used computers are also an alluring choice for starting businesses, government institutions, manufacturers, rental companies and public institutions. SiSo meets this demand by providing high-quality, pleasantly priced used ICT equipment.

SiSo's mission is derived from this unique form of service:

"To be a professional and high qualitative ICT End-of-life service provider, meeting and exceeding expectations of our clients in an environmental respecting manner".

Integral approach benefits

- Actuation, management and control of the entire replacement process (new for old) and the related removal and trading-in of outdated ICT equipment is carried out by a single party.
- Short processing time per installation and low installation costs per workstation by a seamless fit of mentioned activities

“ICT-End of Life Service” benefits

- Guaranteed and or certified destruction of data present on various data carriers.
- Exact specification of removed outdated equipment for the benefit of asset management.
- Market-pursuant achievement of residual value for outdated equipment by acquaintance and active scanning within the used hardware market.
- Standardized, certified and guaranteed approach and execution.
- Short processing cycles and achievement of residual value for used equipment.
- Single point of contact for actuation, management and control of the entire removal process

Removal of confidential data on pc systems

Computer systems with data carriers containing data and or software will be wiped by SiSo in a certified and guaranteed manner. This will be confirmed to our clients by a confidentiality and warranty clause. SiSo performs her “ICT End of Lifecycle Services” for business relations, government institutions and the banking and industrial sector.

However, the service has been set up in such a way that the removal and trading-in services can also be chosen separately.

ICT End of Lifecycle Services Clients

Among our clients for the “ICT End of Lifecycle Services are governmental institutions, the banking sector, insurance companies, the industrial sector and system integrators. SiSo holds a strong position within large companies, due to our meticulous handling of data that needs to be removed on outdated equipment.

SiSo has a large list of references from top 100 companies in the Netherlands. They confide in SiSo, because of the reliability and quality of her services.

International network for ICT End of Lifecycle Service

From her Netherlands and French offices, SiSo collaborates with strategic partners. Though the volume of used ICT hardware in Western Europe is very high, ICT End of Lifecycle Services can only be purchased if there is a realistic sales market for the used equipment in question. The distribution and supply goes through indirect distribution channels. This requires an extensive distribution network. SiSo operates in these markets through certified distribution partners and completes the circle of purchase and sale of used equipment. Because of these collaborations, SiSo is a provider that has an infrastructure to perform international ICT End of Lifecycle Services.
