

- High residual value on depreciated ICT hardware
- Realistic determination of value of depreciated ICT equipment
- Clear report of economical value assessment
- Transport services for all equipment
- Residual value based on extensive asset report
- Various possible financial compensations
- SiSo offers her clients opportunities for donations of ICT hardware to Third World countries

### Remarketing ICT hardware

Each year 500,000 workstations a month are renewed in the Netherlands. Economically already depreciated ICT equipment is replaced by newer models. Often this outdated hardware is removed and or recycled, without thinking about a possible residual value. A ter-

rible waste of hardware! SiSo offers a full service for physical, commercial and administrative processing of ICT equipment that needs to be replaced. We take care of the removal, inventory draw-up, asset registration, data removal and trading-in of used ICT hardware. We achieve a cost-effective operation for the replaced ICT equipment. SiSo also guarantees an alluring residual value on your depreciated ICT hardware!

*Would you like to receive a good residual value for your depreciated ICT equipment?*

### Remarketing ICT hardware

The final residual value sum will be determined based on the test results. This residual value is calculated in combination with services that round up replacement for your organization in one single process. With this, you avoid the red tape involved with hardware removal. All non-functional, zero-value, and other environmentally harmful components will be offered to registered recycling companies.

### Market-pursuant residual value

SiSo achieves the highest residual values, because we offer ICT equipment to growth markets through international distributors. Your depreciated hardware is offered to international distributors specialized in the purchase and sale of used hardware. We guarantee you an optimal residual value.

### **Residual value estimate**

Would you like to know the value of your surplus or outdated ICT equipment? Based on the supplied return equipment specifications we can give you an estimate, if so desired. We will guarantee you a market-pursuant residual value. The amount will be transferred into your account within thirty days upon receipt of your invoice.

SiSo employs two models for determining residual value:

1) We aim at selling your used equipment at the highest possible price within a set term. You'll receive a percentage of the gross revenue, which will be negotiated later, based on the age of the ICT hardware and its condition. All data is recorded in a clear report.

The net revenue remains after discount of transport and recycling costs. The amount will be transferred into your account within thirty days upon receipt of your invoice.

2) Fixed price

You'll receive a provisional estimate on your offered equipment. After a thorough inventory you'll receive a status report, containing among others the specifications in full and the status and composition of all properly functioning components. Based on this, you'll get a final offer. The amount will be transferred into your account within thirty days upon receipt of your invoice.
